Q 4)

```
# import library
import math, random

# Function to generate OTP
def generateOTP():
    # declare a digit variable
    # which store all digit
    digits = "0123456789"
    OTP = ""
    for i in range(4):
        OTP += digits[math.floor(random.random() * 10)]

    return OTP

# Driver code
if __name__ == "__main__":
    print("OTP of 4 digits:", generateOTP())
```
