

Q1.

Name: Pawan Singh Bhatnagar

Page

Three Security Aspects of Google account :

1. Security checkup : This simple tool gives us personalized recommendations to help keep our account secure. It helps to remove risky access to our data. This includes apps, account permissions, connected devices and other things. The checkup page will also give us an overall health of our account by green checkmark or yellow or red exclamation point, based on how many items need to be taken care of.

2. Built-in security

Your google account automatically protects your personal info. and keeps it private and safe. Every account comes with personal features like spam filters that block 99% of dangerous

e-mails before they reach you, and personalized security notification that alert you out of suspicious activity and malicious websites.

### 3. Password Manager

Your google account comes with a built-in password manager that surely saves our passwords in a central place only we can access. When we revisit a site with a stored password, google Password Manager will automatically fill in the password details. This way we don't need to keep a track of different passwords when we use across the internet.
